## ASCO 7000 Series Power Transfer Switches

## ASCO 7000 SERIES

## Power Transfer Switches

## Protecting:

- Healthcare Facilities
- Web Hosting, Internet Data Centers
- Commercial Buildings / Industrial Buildings
- Telecom Central Offices
- Process Manufacturing
- Distributed Power / Load Management

As we become more dependent on the quality and reliability of electrical power, interruption or complete loss of power can create serious and even crippling financial losses, or impose dangers to life and safety.

ASCO Power Technologies (ASCO) provides the solutions to handle the transfer of critical loads to emergency sources reliably and with state of the art products. Using ASCO products can mean the difference between a minor inconvenience and a major catastrophe. You'll find ASCO Power Transfer Switches wherever there is a critical load to be protected.

When flexibility in power switching is a must, ASCO offers a variety of product solutions to meet virtually every application requirement, including distributed generation applications. That's why the 7000 SERIES is available in open, delayed, closed and closed soft load configurations. Additionally, switched or overlapping neutral options provide for reliable operation of ground fault protection systems and reduction of voltage transients from unbalanced load switching.

ASCO Power Transfer Switches are the first CE Marked, IEC 60947-6-1 compliant Transfer Switches in the world.

The Recognized Leader in Power Transfer Switch Technology Offers the Most Advanced Transfer Switches in the World.

Fig. 1: Three Pole 7000 SERIES Automatic Transfer Switch rated 1600 Amperes (shown with optional front connected terminals and Power Manager).

## 7000 SERIES

ASCO Power Transfer Switches are the standard of the industry. High speed transfer of loads between alternate sources of power, regardless of ampacity size, is achieved by a reliable, field proven solenoid operating mechanism. When combined with a programmable microprocessor controller with keypad and LCD display, they offer the most advanced method of transferring all types of loads, such as motors, electronic drives, UPS's and microprocessor based systems. 7000 SERIES Power Transfer Switches are available open or enclosed, in ampacity sizes from 30 through 4000 Amperes with the largest selection of optional accessories offered anywhere. All switching configurations are available with an integrally mounted bypass-isolation switch and/or rated for use in service entrance applications.

## 7000 Series Power Transfer Switches Product Features

- Conventional two-position transfer configuration, plus closed and delayed transition modes of operation. All configurations available with either automatic or non-automatic control.
- UL listed to 1008 Transfer Switch Equipment \& CSA certified to CSA 22.2 No.178-1978 Automatic Transfer Switches.
- Qualified and certified to IEC 60947-6-1, CE marked (optional). (Limited to certain accessories.)
- Rated up to 600 VAC, 30 through 4000 Amperes.
- Reliable and field proven solenoid operating mechanism.
- High withstand and close-on ratings including short time withstand current rating for optimum flexibility in circuit breaker coordination (600-4000 Amperes).
- Solid, switched, or overlapping neutral conductor options.
- Front replaceable main and arcing contacts (800-4000 Amperes).
- Programmable microprocessor controller with keypad and LCD display.
- Centrally located terminal block for customer control connections (260-4000 Amperes).
- 16 mm , industrial grade control switches and indicating lights.
- Switch position LED indicators and source acceptability lights.
- Standard ground conductor connections.
- Four auxiliary contacts, two contacts closed when switch is in normal position and two contacts closed when switch is in emergency position.
- Local/remote communications capability for interfacing with ASCO POWERQUEST ${ }^{\oplus}$ communication products.

Fig. 2: Four pole, Closed Transition Transfer Switch rated 1000 Amperes in Type 1 enclosure.

## Delayed Transition Transfer Switching

ASCO Delayed Transition Transfer Switches are designed to provide transfer of loads between power sources with a timed load disconnect position for an adjustable period of time. Applications include older style variable frequency drives, rectifier banks, and load management applications.

- Available in 150 through 4000 Amperes.
- Utilizes reliable, field proven solenoid operating mechanisms.
- Mechanical interlocks to prevent direct connection of both sources.
- Indicator light ( 16 mm , industrial grade type LED) for load disconnect position.
- Adjustable time delay for load disconnect position.

## Closed Transition Transfer Switching

ASCO Automatic Closed Transition Transfer Switches feature main contacts that overlap, permitting the transfer of electrical loads without power interruption. The switch transfers in a make-before-break mode if both sources are within acceptable parameters. Control logic continuously monitors source conditions and automatically determines whether the load transfer should be open (conventional non-overlap mode) or closed transition. Available 150 through 4000 Amperes.

Closed Transition Transfer within 5 electrical degrees is achieved passively, without control of engine generator set. Therefore, no additional control wire runs are required between the ATS and engine generator set governor. Plus, protective relaying may not be required under normal operation since the contact overlap time is less than 100 milliseconds (consult your local utility on protective relay requirements).

Failure to synchronize indication and extended parallel time protection is built-in to all 7000 Series closed transition controls to prevent abnormal operation.

Fig. 3: Four pole, Delayed Transition Transfer Switch rated 2000 Amperes.

## ASCO <br> 7000 Series Power Switching Solutions

## Non-Automatic Transfer Switching

ASCO Non-Automatic Transfer Switches are electrically operated units which are operated with manual control switches mounted locally or at remote locations.

- Sizes from 30 through 4000 Amperes.
- Microprocessor based controller provides for addition of optional accessories.
- Controller prevents inadvertent operation under low voltage conditions.
- Low control circuit operating currents allow for long line runs between remotely mounted manual control switches and the transfer switch.
- Source acceptability lights inform operator if sources are available to accept load.
- Standard inphase monitor can be activated for transferring motor loads.

Fig. 4: Three pole Non-Automatic, electrically operated 400 ampere switch shown in Type 1 enclosure.

Notes 1) All WCR values indicated are fested in accordance with the requirements of UL 1008, 7th Edilion. See ASCO Pub. 1128 for more WCR information
2) Application requirements may permil higher WCR for certain switch sizes.
3) Based on 0.05 Sec (approx, 3 cycles) for all "Frame" ratings except D30-230A which is 0.025 Sec (approx. 1.5 cycles) and U2600-4000A which is 0.060 Secs.

Applicable to circuil breakers with instantaneous trip elements.
4) Short Time ratings are provided for applications involving circuit breakers that utilize trip delay seltings for system selective coordination
5) Optional front connected service (Accy 40MY and 40NY) limits 1600 and 2000A G Frame switches
6) Switches utilizing overlapping neutral (code "C") have 35kA, 0.050 Sec time based rating at 480 V Max
7) 3000A ratings are for Transfer Switch configurations only
8) $J 150,200,230$ Amp available in 7ACTS, 7ADTS, 7ASLS, \& All 7000 Bypass Switches only
9) Rating shown is for Bypass switches only. Transfer Switch rating is 100 kA

## Automatic Transfer Bypass-Isolation Switches

Fig. 5: Rated 150-600 Amps

Fig. 6: Rated 600-1200 Amps

Fig. 7: Rated 800-3000 Amps

Fig. 8: Rated 4000 Amps

ASCO Automatic Transfer \& Bypass-Isolation Switches are available in open transition, closed transition and delayed transition designs. The bypass and isolation features allow the primary automatic transfer switch to be inspected, tested, and maintained without any interruption of power to the load. They also provide redundant power transfer in the event the ATS is disabled or removed from service.

- Available 150 to 4000 Amperes.
- Allows bypass-isolation without load interruption.
- Bypass switch and transfer switch have identical electrical ratings.
- Heavy duty mechanical interlocks prevent undesirable operation.
- Bypass contacts carry current only during bypass mode.
- Transfer switch is drawout design for ease of maintenance.
- Bypass and isolation handles are permanently mounted. The bypass switch has dead front quick-make, quick-break operation for transferring of loads between live sources.
- Bypass switch is fully rated for use as a manual 3-position transfer switch.
- Bypass and isolation functions are simple, requiring a total of two operating handles.
- No toggle switches, push buttons, selector switches or levers are required for bypass-isolation operation.
- Mechanical indicators show bypass and transfer switch positions.
- 800-1200 ampere available in shallow depth, front connected or rear connected designs.

## Transfer Switch Drawout Features (150-4000 Amperes)

Fig. 9: Bypass-Isolation Transfer Switch secondary disconnects and optional automatic shutters.

- Automatic secondary disconnects remove all control power as switch is withdrawn.
- Drawout carriage provides for easy transfer switch maintenance and/or removal via commercially available breaker hoists.
- Optional transfer switch lifting yoke kit available
- Optional automatic shutters which close when the transfer switch is withdrawn to provide bus isolation, specify accessory 82C.(1600-4000A only)

$\square$ In test position control panel remains energized to allow for electrical operation of a transfer switch.

The ASCO Service Entrance Power Transfer Switch combines automatic power switching with a disconnect and overcurrent protective device on the utility source. The power transfer switch meets all National Electric Code requirements for installation at a facility's main utility service entrance. Service entrance rated transfer switches generally are installed at facilities that have a single utility feed and a single emergency power source. A circuit breaker serves as the utility disconnect and links are provided to dis-connect both neutral and ground connections.

This product is either UL 1008 or UL 891 listed and is available up to 600V and 4000A in Standard, Delayed, Closed Transition, Soft Load, and Bypass Isolation Configurations.

## Standard Features

- Available from 150 to 4000 Amperes
- ASCO 7000 Series Power Transfer Switch is UL 1008 Listed
- Standard UL Type 1 Enclosure
- Disconnect and overcurrent protective device on the utility source: molded case circuit breaker 150 to 2000 Amp; insulated case 3000 to 4000 Amp
- Disconnect link on Neutral
- Disconnect link on Ground
- Ground and Neutral Bus, all silver-plated copper
- Solderless screw type terminals for External Power Connections
- Meets all NEC requirements for use as service entrance
- Internet enabled monitoring and control
- Service entrance breakers are rated: $100 \%$ for 1000 Amps and above; 80\% below 1000 Amps for all bypass switches - 100\% for 2500 Amps and above; 80\% below 2500 Amps for all standard transfer switches

Fig. 13: Ground and neutral disconnect links

One line diagram of a typical service entrance rated transfer switch available in Solid, Switched or Overlapping Neutral

* Ground fault trip protection provided on sizes of 1000 Amperes and above

## Optional Features

- Enclosures - Secure Double Door
- UL Type 3R w/strip heater \& thermostat
- UL Type 4 or 4X
- UL Type 12
- Connections
- Crimp lugs
- Bus Riser on Normal, Emergency or Load
- Protective Relays/Metering
- Accessory 85L , see page 15
- Surge Suppression - Accessory 73, Surge protector (see pg. 14)
- ASCO POWERQUEST ${ }^{\oplus}$ products (see pages 16-21)
- ASCO 72E Ethernet Connectivity module, page 17
- ASCO 5310/5350 Remote annunciators, page 17
- ASCO 5400 Power Quality Meters, page 17
- Additional Breaker(s)
- Circuit Breaker on Emergency
- Load Distribution Panel
- Optional high AIC ratings on breakers

7000 Series Service Entrance Power Transfer Switches

| 4000 | 100 | N/A |

Notes: 1. Unit is designed for top and bottom cable entry for all services and load.
2. Enclosures for $600-3000 \mathrm{amps}$ are free standing.
3. When temperatures below $32^{\circ} \mathrm{F}$ can be experienced, special precautions should be taken, such as the inclusion of strip heaters, to prevent condensation and freezing of this condensation. This is particularly important when environmental enclosures (Type 3R, 4 \& 12) are ordered for installation outdoors. Type 3R enclosures are not suitable for installations conducive to windblown snow or rain conditions.
4. Dimensional data is approximate and subject to change. Certified dimensions available upon request.
Type 3R enclosures are not suitable for installations conducive to windblown snow or rain conditions.
5. Contact ASCO for extended warranty options.

The 7000 Series Microprocessor Based Controller is used with all sizes of Power Transfer Switches from 30 through 4000 Amperes. It represents the most advanced digital controller in the industry and includes, as standard, all of the voltage, frequency, control, timing and diagnostic functions required for most emergency and standby power applications.

Because of severe voltage transients frequently encountered with industrial distribution systems, the microprocessor logic board is separated and isolated from the power board as shown below. This improves electrical noise immunity performance and helps assure compliance with the rigorous transient suppression standards highlighted below.

Fig. 14: 7000 Series Microprocessor Controller.

## 7000 Serles Microprocessor Based Controller

Emission Standard - Group 1, Class A
Generic Immunity Standard, from which:
Electrostatic Discharge (ESD) Immunity
Radiated Electromagnetic Field Immunity
Electrical Fast Transient (EFT) Immunity
Surge Transient Immunity
Conducted Radio-Frequency Field Immunity
Voltage Dips, Interruptions and Variations Immunity

EN 55011:1991
EN 50082-2:1995
EN 61000-4-2:1995
ENV 50140:1993
EN 61000-4-4:1995

EN 61000-4-6:1996
EN 61000-4-11:1994

## 7000 Series Microprocessor Controller

## Features

- Digital microprocessor.
- Touch pad programming of features and settings without the need for meters, or variable power supplies.
- Sixteen (16) selectable operating voltages available in a single Controller.
- On-board diagnostics provide control panel and ATS status information to analyze system performance.
- Displays and counts down active timing functions.
- Selectable multi-language display
(English, German, Portuguese, Spanish, or French. For others contact ASCO).
- Password protection to prevent unauthorized tampering of settings.
- Remote monitoring and control with ASCO POWERQUEST ${ }^{\circledR}$ communications products. Specify optional accessory 72E.
- Load shed option for bus optimization applications. Specify optional accessory 30B.
- Historical event log
- Statistical ATS systems monitoring information

## Voltage and Frequency Sensing

- 3-Phase under and over voltage settings on normal and emergency sources.
- Under and over frequency settings on normal and emergency.
- True RMS Voltage Sensing with + /- $1 \%$ accuracy; Frequency Sensing Accuracy is $+/-0.2 \%$.
- Selectable settings: single or three phase voltage sensing on normal and emergency; 50 or 60 Hz .
- Phase sequence sensing for phase sensitive loads.
- Voltage unbalance detection between phases.

## Status and Control Features

- Output contact (N/O or N/C) for engine-start signals.
- Selection between "commit/no-commit" on transfer to emergency after engine start and normal restores before transfer.
- Advanced inphase algorithm which automatically measures the frequency difference between the two sources and initiates transfer at appropriate phase angles to minimize disturbances when transferring motor loads.
- Event log displays 99 logged events with the time and date of the event, event type and event reason.
- Output signals for remote indication of normal and emergency source acceptability
- Statistical ATS/System monitoring data screens which provide:
- Total number of ATS transfers.
- Number of ATS transfers caused by power source failure.
- Total number of days ATS has been in operation.
- Total number of hours that the normal and emergency sources have been available.

## Time Delays

- Engine start time delay - delays engine starting signal to override momentary normal source outages - adjustable 0 to 6 seconds.
- Transfer to emergency time delay - adjustable 0 to 60 minutes.
- Emergency source stabilization time delay to ignore momentary transients during initial generator set loading - adjustable 0 to 6 seconds.
- Retransfer to normal time delay with two settings:
- Power failure mode - 0 to 60 minutes.
- Test mode - 0 to 10 hours.
- Unloaded running time delay for engine cooldown adjustable 0 to 60 minutes.
- Pre and post transfer signal time delay for selective load disconnect with a programmable bypass on source failures - adjustable 0 to 5 minutes. This signal can be used to drive a customer furnished relay, or for (2) sets of double throw contacts rated 3 amps at 480 volts AC, specify ASCO optional accessory 31Z.
- Fully programmable engine exerciser with seven independent routines to exercise the engine generator, with or without loads, on a daily, weekly, bi-weekly or monthly basis.
- Contains all alarm signals, logic and time delays for use with closed transition switches.
- In synch time delay - 0 to 3 seconds.
- Failure to synchronize - 1 to 5 minutes.
- Extended parallel - 0.1 to 1.0 seconds.
- Delayed transition load disconnect time delay adjustable 0 to 5 minutes.

## Control Switches and Indicating Lights for Conventional 2-Position Switches

- Switch position indicating lights ( 16 mm , industrial grade LEDs).
- Source acceptability indicating lights with true indication of the acceptability of each source, as determined by the voltage, frequency, voltage unbalance, and phase sequence settings of the control panel ( 16 mm , industrial grade LEDs).
- Three position ( 16 mm , industrial grade type) selector switch:
- Automatic: Normal maintained position.
- Test: Momentary position to simulate normal source failure for system test function.
- Reset Delay Bypass: Momentary position to bypass transfer and re-transfer time delay.

Fig. 16: 7000 Series User Controls and Indicators.

## Control Switches and Indicating Lights for Closed Transition Switches

Fig. 17: 7000 Series User Controls and Indicators.

- Extended Parallel Time - Provides visual indication when the pre-set extended parallel time has been exceeded. The controls automatically open the emergency or normal main contacts. Separate contact also available to shunt trip external breaker.
- Failure To Synchronize - Visually displays a failure to synchronize alarm if the time delay settings is exceeded, during closed transition transfer operation.
- TS Locked Out - Prevents transfer in either direction if the extended parallel time is exceeded.
- Alarm Reset - Resets extended parallel and failure to synchronize alarms.
- Closed Transition Bypass - Pushbutton allows transfer between sources in an open transition mode.

## 7000 Series Power Control Center

Fig. 18: 7000 Series Power Control Center.

The 7000 SERIES microprocessor controller is a Power Control Center which allows the user to easily access detailed information on: system status; power source parameters; voltage, frequency and time delay settings; optional feature settings; historical event log; and system diagnostics. A four line, (20) character LCD has a backlit display which enables easy viewing under all conditions. The user can navigate through all screens using only six buttons, which also allows selection of: (18) different source parameter settings; (16) standard time delays; (12) standard feature settings; up to seven independent engine exercise routines; and even the language (English, German, Spanish, French, etc.) which appears on the display.

Since the Power Control Center must be visible and operable through the enclosure door, it has been qualified for use in industrial and outdoor applications. This includes installation in Type 3R (outdoor/rainproof), 4 (weatherproof) and 12 (indoor/industrial) enclosures. For applications with regular exposure to direct sunlight a double door for UV protection is recommended.

7000 Series Power Control Center Screens

## Status

Displays system status in clear, concise language.
Message shown indicates normal source is acceptable and the load is connected to the normal source.

Time Delay Status

Active time delay status displays time remaining until next control event.

## Source Status

| Normal Source |
| :---: |
| Vab $=480 \mathrm{~V}$..................ABC |
| Vbc $=480 \mathrm{~V}$.........Vunbal $=1 \%$ |
| $\mathrm{Vca}=480 \mathrm{~V}$...............60.0Hz |

Displays voltage for each phase, frequency, phase rotation and voltage unbalance for both normal and emergency sources.

Inphase Transfer Mode

Displays the relative phase angle between sources and frequency differential to indicate the controller is awaiting an inphase condition.

## Settings

## Voltage and Frequency Settings

| Normal Voltage |
| :---: |
| Dropout.............85\%.408V |
| Pickup............90\%.432V |
| O.V. Trip........ $110 \% .528 \mathrm{~V}$ |

Provides voltage and frequency setting values for normal and emergency sources. Voltage pick-up, dropout and trip settings are set in percentage of nominal voltage and are also displayed in rms voltage values.

## Engine Exerciser

| P1.................Engine.Exerciser |
| :--- | :--- |
| Enable:.....Yes...WLoad:....Yes |
| Start:19h30. ALL MON |
| Run.Time:...............2h15min |

Seven independent programs, load/no load selection, flexible run times and daily, weekly, bi-weekly and monthly exercise routines.

## Time Delay Settings

TD N>E Xfer Signal Bypass if $N$ Fail: No Pre Xfer: 0 min 205 Post Xfer: 0 min 20S

Provides direct reading display for setting time delays.

## Feature Settings

Standard features can be activated with the keypad. As an example, when enabled, the "shed load" option causes the transfer switch to transfer the load off of the specified source. If desired, the load shed transfer can be made inphase.

## Data Logging

Historical Event Log

| 16.AUG02/95..........13h10:17 |
| :--- | :--- |
| Eng.Start....................13Fail. |
| 15.AUG02/95................... |
| Xfer.N>E..................... |

Displays detailed information for last 99 events, including time of occurrence, length of event, date and reason for event.

## Time Delays

2C Provides an extended time delay on engine starting. The standard feature one time delay is adjustable from zero to six seconds. Accessory 2C allows this time delay to be adjustable from zero to sixty minutes in one second intervals factory set at five minutes.
1G Similar to accessory 2C except using 24 volt DC external input signal. 7000 SERIES controller remains active when both power sources are de-energized* $1 G B \quad$ Same as accessory 1G except using 120 volt AC external input*

* add suffix 1 to include external power to power manager or
power meter when applicable

## Manual Controls for Automatic Transfer Switches

6C Reset switch for manual retransfer to normal with automatic retransfer in the event of emergency source failure.
6D Selector switch for automatic/manual retransfer to normal. Automatic bypass if emergency fails.

## Indicators

14A/14B Additional auxiliary contact sets to indicate switch position. Two sets are standard. Specify total number of sets if more are required.
Two-pole, double-throw contacts operate when emergency source voltage is present at transfer switch terminals.

18G Two-pole, double-throw contacts operate when normal source voltage is present at transfer switch terminals.

99 "Push-to-Test" feature on all pilot light indicators.

## Customer Control Circuits

30A Load-shedding circuit initiated by opening of a customer-supplied contact.
30B* Load-shedding circuit initiated by removal of customer-supplied control voltage. *(Specify voltage).
$31 Z \quad$ Selective load disconnect control contacts (two provided) which operate with time delay prior to and/ or after load transfer and retransfer.
43R Terminal block for all customer control connections on 30-150 amp only (standard on all other sizes).

Note: An externally operable quick-make, quick-break (QMQB), manual handle is available on some 7000 SERIES product configurations. (Consult ASCO for guidance.)

## Neutral Conductor Options

- Solid neutral, with fully-rated terminals. (AL-CU) UL Listed.
- Conventional neutral switching pole.
- Overlapping neutral transfer contacts. Allows for proper ground-fault sensing and avoids generator voltage transients during transfer.
Note: Specify neutral option in catalog number, see page 22 for instructions.

## Extension Harness

37B Six foot ( $6^{\prime}$ ) extension harness to increase distance between transfer switch and control panel on open-type units.

## Communications

72E
5150 Ethernet Connectivity Module offers communication to transfer switch and metering with embedded webpages.
72SW
An Industrial Ethernet Switch mounted in the enclosure used in conjunction with 5150 Connectivity Module (acc. 72E) metering device. Includes 2 available Ethernet ports and 2 multimode ST Fiber connectors.

## Surge Protection

ASCO Pulsar 450 rated 65KA
73AC1 Normal source protection. (3Ø, 4wire WYE)
73AC2 Emergency source protection. (3Ø, 4wire WYE)
73AC3 Load side protection. (3Ø, 4wire WYE)
Note: Other distribution voltages available (Contact ASCO).

## Special Applications

45 Custom Alphanumeric nameplate mounted on the front of the switch
111A Generator - to - Generator for Standby Applications
111B Generator - to - Generator for Prime Power Applications
125 Seismic Certification to the requirements of the international building code for electrical equipment
131 Certification of compliance with the American Recovery \& Reinvestment ACT (Buy American Provision) - Must be specified at time of order placement

## Bypass-Isolation Switch Options

14A1 Auxiliary contact to close in "Bypass to Normal" position.

14U Auxiliary contact to close when transfer switch is in "Isolate" position.

14V Auxiliary; contact to close when transfer switch is in "Test" position.
82C Automatic shutters for bus isolation when transfer switch is withdrawn. (see page 6 for details)
82E LED Bypass status indicator, optional on G frame 1600A-4000A only. Standard for all other size switches

## ASCO 5200 Series Metering

## Power Manager

The ASCO 5200 Series Power Meters are microprocessor based metering devices that provides real-time measurement of single and three phase power systems. The 5200 SERIES uses digital signal processing technology to measure voltage and current per phase; real, reactive and apparent power, and bi-directional energy. All measurements can be viewed locally with a backlit liquid crystal display and/or displayed remotely with ASCO POWERQUEST ${ }^{\circledR}$ products.

Direct voltage input for systems up to 600 Volts AC can be monitored without the use of external potential transformers (PTs). Measures three phase currents and a fourth current input is available for measuring current in the neutral conductor. The 5200 Series includes one discrete input for transfer switch position.

## Power Metering

- Voltage:

Line - Line: VAB, VBC, VCA, VAVERAGE
Line - Neutral: VAN, VBN, VCN, VAVERAGE

- Frequency: 45.0 to 66.0 Hertz
- Current: IA, IB, IC, IAVERAGE
- Unbalance \%: Voltage, Amps
- Real Power: KWA, KWB, KWC, KWNET
- Reactive Power: KVARA, KVARB, KVARC, KVARNET
- Apparent Power: KVAA, KVAB, KVAC, KVANET
- Real Energy: KWHIMPORT, KWHEXPORT, KWHNET
- Reactive Energy: KVARHIMPORT, KVARHEXPORT, KVARHNET
- Power Factor: PFA, PFB, PFC, PFNET

## 5220 Power Manager Data Access

- Eight digital inputs, four relay outputs.
- Input/Output 15-character, user definable screen display for identification of input/output signals.

## Communications

- Modbus RTU and TCP/IP capability
- Ethernet compatible when combined with 5150 Connectivity Module (72E).

Fig. 19: ASCO 5210 SERIES Power Meter.

Fig. 20: ASCO 5220 SERIES Power Manager.

## Configurable Designations

- Local - A four line, 20 character LCD backlit display.
- 5220 Power Manager provides user programmable setpoints based on twelve metering and I/O parameters. Each setpoint allows the user to select the parameter, the trip \& reset levels, the trip \& reset time delays and the alarm type or relay output to trigger. This can be used for protective relaying and peak shaving applications.
- 100 event data logging feature.

## Integrated ATS Features

When configured on load of ATS:

- Displays ATS position.
- Displays power data as a function of ATS position (normal/emergency).
- Accumulates energy data separately for normal and emergency sources.

| Optional <br> Connection Arrangements |  |  |
| :--- | :---: | :--- |

## $18 \mathrm{H}^{\circ}$ PowerQuest ${ }^{*}$ Power Monitoring and Control Systems

## FULFILL YOUR NEED

Drill down for a closer look - Each transfer switch, generator, breaker and any other power equipment has its own dedicated screens.

It's the new ASCO PowerQuest ${ }^{\circledR}$ Power Monitoring and Control family.

The PowerQuest ${ }^{\circledR}$ family is the most comprehensive communication, monitoring and control solution ever offered by ASCO. It empowers you. It fulfills your need to test, manage loads, optimize the bus bar, remotely monitor and otherwise be aware of the status of your facility's utility source and on-site power. You have both the Power to Know and the Power to Do.

Whether you require standard monitoring and control, or a comprehensive Critical Power Management System, PowerQuest can satisfy your needs.

Hardware. Software. Installation and testing. Service. And upgrades and technology refreshes. A truly complete solution for all your communication, monitoring and control needs.

The following PowerQuest ${ }^{\circledR}$ pages can help you determine-easily- the type of PowerQuest system you need for your ASCO power switching and controls, and third-party equipment.

PowerQuest ${ }^{\circledR}$ provides monitoring, alarming and control of Critical Power Management Systems, which comprise transfer switches, paralleling control switchgear, gensets, circuit breakers, distribution and other gear. It also integrates with building management systems.

## BE EMPOWERED

PowerQuest ${ }^{\oplus}$ can enable you to:

- Monitor and control power transfer switches, paralleling control switchgear, gensets, breakers, bus bars and other equipment
- Monitor normal and emergency voltages and frequency and their settings
- Know transfer switch position and source availability
- Transfer and re-transfer loads for system testing
- View and adjust transfer switch time-delay settings
- Know each transfer switch's rating and identification
- Receive automatic alerts on system operation via e-mail, pager, or selected system alarms
- View current, power and power factor
- View transfer switch event log and know the transfer switch test schedule

5150, 5160
Connectivity Modules

An ASCO 5150 Connectivity Module (left) provides 100 Mbps Ethernet Connectivity for ASCO Transfer Switches and Power Meters and includes AES 128-bit Encryption, as per NIST, for enhanced security.

The ASCO 5160 Remote Connectivity Unit (RCU) (right) provides 10 Ethernet and Dual-Fiber Optic connections in a NEMA 3R enclosure.

5210, 5220
Power Meters

ASCO 5210 (left) and 5220 (right) Power
Meters measure, displays and provides singleor 3-phase Energy and Power information with Ethernet via the ASCO 5150 Communication Module.

5310, 5350 Annunciators

ASCO 5310(left) and 5350(right) ATS Remote Annunciators provide distributed monitoring of transfer switch position and source availability as well as transfer test and re-transfer control.

5010 Remote Display Unit,(left) 5490 Critical Power Quality Meter, (right)

## ASCO 5400 Series Power Quality Meters

The ASCO Power Quality Meters provide intelligent power analysis, energy measurement and event recording for critical and sensitive loads. Its unique continuous waveform and harmonic recording capabilities ensure all events are captured, improves response time, and helps identify corrective action to power quality related issues.

Enterprise Critical Power Management System

5700 Series provide various levels of monitoring, control and management capability of power equipment. It seamlessly monitors ASCO transfer switches as well as generators, breakers, paralleling bus, panel boards and other power equipment via a 5221 PMU. It consists of servers and touch screen interfaces.

## The Power To Know

## Selecting the system that provides your level of need-to-know information and control...

You Need...

Your Application Is...
Desired Capabilities
PowerQuest
Standard Capabilities

Basic monitoring, remote alarming and control, or, if you simply want to know transfer switch status or perform monthly transfer testing

Residential, light commercial and retail establishments

Local or remote, floor-level monitoring and control, or as part of a larger, facility-wide monitoring and control system

A ‘specify-your-own’ Critical Power Management System (CPMS) that includes gensets, circuit breakers, and reports on energy, trending, power demand, bypass status, diagnostics, alarming, and component-level monitoring and control.

Commercial, retail, telecom, agriculture, municipal, such as waste water treatment, light industrial plants, educational campuses and healthcare facilities requiring distributed power and load management

Local, floor-level, or facil-ity-level monitoring and control; 5700 systems can be configured in three capability levels:

- Essential (single building)
- Professional (multiple buildings, single campus)
- Enterprise (multiple campuses)

A Critical Power Management System providing sys-tem-wide monitoring, alarming and control of transfer switches, paralleling control switchgear, gensets and distribution, both on and off site; also integrates PLCs, building management systems and on-site, simulator training. Power quality and a range of other information is provided.

Regional and global networks of data centers, financial institutions, Web hosting companies and healthcare campuses that operate expansive and sophisticated on-site power systems that are essential for providing 24/7 power reliability

Local floor-level monitoring and control, and remote system-wide monitoring and control seamlessly integrated with building management systems; communication paths can be Ethernet, Webbased PC's and monitors; simulator training that mimics the live system allows conducting 'what if' scenarios, without risking system operation.

Identifies the ASCO products and components required to provide the functionality you need.

Products

ASCO Series 185 and Series 300 Automatic Transfer Switches

Required Components

Connectivity Modules and Annunciators

Locally monitor switch position, source availability and the status of on-site power system devices via customized Web page. Initiate tests and push-button remote transfer. Aural, visual

ASCO 4000 Series and 7000 Series Automatic Transfer Switches, including 7000 Series Bypass-Isolation

Standard components, plus Power Control System Management and Operator Interface Terminals

alarms.
Functionality

ASCO 7000 Series Automatic Transfer Switches, including Bypass-Isolation and 7000 Series Generator Paralleling Control Switchgear

Standard and Configurable components, plus higher performance Power Control System and Data Management Screens, and an on-site Simulator Training System

Interact fully with incoming utility service boards, mission critical paralleling gear, transfer switches, UPSs, STSs and PDUs... and interface with Building Management Systems. Capture, store and analyze quantities of data to optimize on-site power operation. Use your display devices and/or ASCO 42" LCD screen. Highly customize your GUI with sophisticated HMI/ SCADA software.

## 18 ${ }^{\oplus}$ PowerQuest 5700 Critical Power Management System

To order an ASCO 7000 SERIES Power Transfer Switch, complete the following catalog number:

## The Example Catalog Number above is 7ATSA3400N5XC ( X is used to specify optional accessories).

## Transfer Switch Configurations

7A TS, 7N TS, 7A DTS, 7A CTS, 7N DTS, 7N CTS
Sizes of UL-Listed Solderless Screw-Type Terminals for External Power Connections

| Switch Rating <br> amps | Max \# of Conductors <br> per Terminal | Range of AL-CU <br> Conductor Sizes |
| :---: | :---: | :---: |
| $30-230^{3}$ | One | \#14 to $4 / 0 \mathrm{AWG}$ |
| $150^{*}, 260,400$ <br> *150 for CTS and DTS Only | One | \#4 AWG to 600 MCM |
|  | Two | $\# 1 / 0 \mathrm{AWG}$ to 250 MCM |
| 600 | Two | $\# 1 / 0 \mathrm{AWG}$ to 600 MCM |
| $800-1200^{1}$ | Four | $\# 1 / 0 \mathrm{AWG}$ to 600 MCM |
| $1600-2000^{2}$ | Six | $\# 1 / 0 \mathrm{AWG}$ to 600 MCM |
| $2600,3000^{2}$ | Twelve | \#1/0 AWG to 600 MCM |
| $4000^{2}$ | Twelve | $\# 2 / 0 \mathrm{AWG}$ to 600 MCM |

Notes: 1. Unit is designed for top cable entry of emergency and load and bottom entry of normal. Optionally, the switch may be supplied with reverse source and/or bottom entry load, when specified.
2. All main terminals are rear connected.

## Transfer/Bypass Configurations

7A TB, 7N TB, 7A DTB, 7A CTB, 7N DTB, 7N CTB
Sizes of UL-Listed Solderless Screw-Type Terminal for Power Connections

| Switch Rating <br> amps | Max \# of Conductors <br> per Terminal | Range of AL-CU <br> Conductor Sizes |
| :---: | :---: | :---: |
| $150,200,230$ <br> 260,400 | One | \# 4 AWG to 600 MCM |
| $2600^{4}$ | Two | \# 1/0 AWG to 250 MCM |
| $800,1000,1200^{4}$ | Two | \# 2 AWG to 600 MCM |
| $1600-2000^{4}$ | Four | \# 1/0 AWG to 600 MCM |
| $2600,3000^{4}$ | Six | \# 1/0 AWG to 600 MCM |
| $4000^{4}$ | Ten | \# 2 AWG to 600 MCM |

3. 200 and 230 amp rating for copper conductors only for transfer switch configurations only.
4. All main terminals are rear connected. A front connected version is available in 600 and 1200 amp ratings only with top cable entry only. See pages 25-27 for dimensional data and additional information.
5.Type 304 stainless steel standard. Specify 316 ST. Steel for installations subject to salt water and corrosive environments

## 2-Position Transfer Switching 7A TS, 7N TS (Non-Bypass)

| Switch Rating <br> Amps | Poles | Width <br> inches (mm) | Height <br> inches (mm) | Depth <br> inches (mm) |
| :---: | :---: | :---: | :---: | :---: |
| Enclosed UL Type $\mathbf{1}^{2}$ |  |  |  |  |
